In the Drug Line

You will always find it at our place, and if we tell you that it is O. K. we will "back it up" or refund your money.

ARTHUR IRWIN, - - - Druggist.

Divisions of Time.

Nature has divided the year into twelve parts, the revolutions of the moon being 12 in a year with a remainder of about 11 days, hence the artificial division of the day into 12 parts and the night into 12 parts. Among the Romans an hour was the 12th part of the time from sunrise to sunset, and hence was short or long according to the season.

On the campus of Wofford College is a sun dial which gives what is called apparent time, which is the correct or mean time only four times during the year—on 15th April, 15th of June, 1st of September and 24th of December. The sun reached the 12 o'clock mark which was made on the floor of the county school house of years ago, sometimes 16 minutes ahead of clock time and sometimes 16 minutes behind clock time.

Four points in the 24 hours have been taken as the beginning of the day: Sunrise, sunset, midnight and noon. Astronomers and navigators count the hours from 1 to 24, avoiding the confusion made by the letters a. m. and p. m. The astronomical day begins at noon.

We are prepared in our Repair Department to take care of your broken Jewelry, Watches and Clocks—skilled workmen in all lines. Our stock of

Jewelry, Watches, Diamonds

Cut Gloss, etc., is large and complete. Your patronage is solicited, and good treatment awaits you. The sign of the BIG WATCH.
